

NBA PROJECT FINAL PRESENTATION

Muhammad Khan

Sanat Dusad

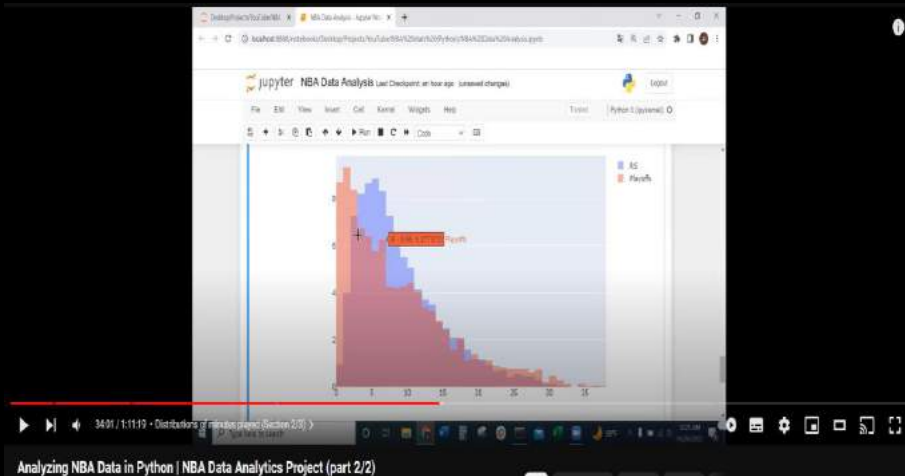

Rian Dolphin

RESEARCH QUESTIONS

- RQ1: Who is the greatest scorer, playmaker, and defender in NBA history?
- RQ2: What factors impact draft/trade strategies the most?
- RQ3: Has the level of the NBA gotten better or worse?
- RQ4: Which performance stats contribute to determining a team's success the most?

RELATED WORK

NBA Sports Betting Using Machine Learning 🏀

```
Cleveland Cavaliers vs Brooklyn Nets (58.7%): UNDER 225.5 (72.3%)
Indiana Pacers (73.0%) vs Dallas Mavericks: UNDER 219.5 (58.6%)
Philadelphia 76ers (51.5%) vs Boston Celtics: UNDER 221.5 (64.7%)
Atlanta Hawks (85.1%) vs Detroit Pistons: UNDER 220 (59.3%)
Toronto Raptors vs Miami Heat (52.1%): UNDER 222 (57.0%)
Minnesota Timberwolves vs Orlando Magic (58.5%): OVER 218 (50.1%)
Houston Rockets vs Phoenix Suns (80.9%): UNDER 218 (62.1%)
Golden State Warriors vs San Antonio Spurs (51.7%): OVER 228.5 (50.6%)
LA Clippers (98.0%) vs Sacramento Kings: OVER 230 (75.1%)
Portland Trail Blazers (59.9%) vs Memphis Grizzlies: UNDER 223 (61.0%)
```

A machine learning AI used to predict the winners and under/overs of NBA games. Takes all team data from the 2007-08 season to current season, matched with odds of those games, using a neural network to predict winning bets for today's games. Achieves ~69% accuracy on money lines and ~55% on under/overs. Outputs expected value for teams money lines to provide better insight. The fraction of your bankroll to bet based on the Kelly Criterion is also outputted. Note that a popular, less risky approach is to bet 50% of the stake recommended by the Kelly Criterion.

NBA-analytics

Short, offhand analyses of the NBA

Note: All stats are from stats.nba.com, unless noted.

Topics Covered

- Underrated Assisters
- Consistent Players
- Why is Miami the worst team at drives?
- Which teams run the wrong plays?
- Shot Clock Analysis
- Westbrook Rebounding
- Defender distance
- Aging player's efficiency
- Steal efficiency
- Timeout Conversion
- Rim Protection
- Tanking
- Empirical Bayes estimation of NBA statistics
- James-Stein estimation of NBA statistics
- Player Efficiency Rating (PER)

DATASET(S)

`player_data(2630 players)`

`team_data(30 teams)`

`draft/trade_data(5000 trades/drafts)`

`boxScore_data(1307 games)`

A man and a woman are shown from the chest up, positioned side-by-side against a solid pink background. The woman on the left has long brown hair and is wearing a dark red long-sleeved shirt. The man on the right has short brown hair, a beard, and is wearing round glasses and a light blue denim shirt. Both individuals have wide-eyed, open-mouthed expressions of surprise or excitement, and their hands are clasped together in front of their chests. Overlaid on the image is the text 'SO...WHO IS THE GREATEST SCORER OF ALL TIME?' in a white, bold, sans-serif font. A short white horizontal line is positioned below the text, starting from the left edge of the frame.

SO...WHO IS THE GREATEST SCORER
OF ALL TIME?

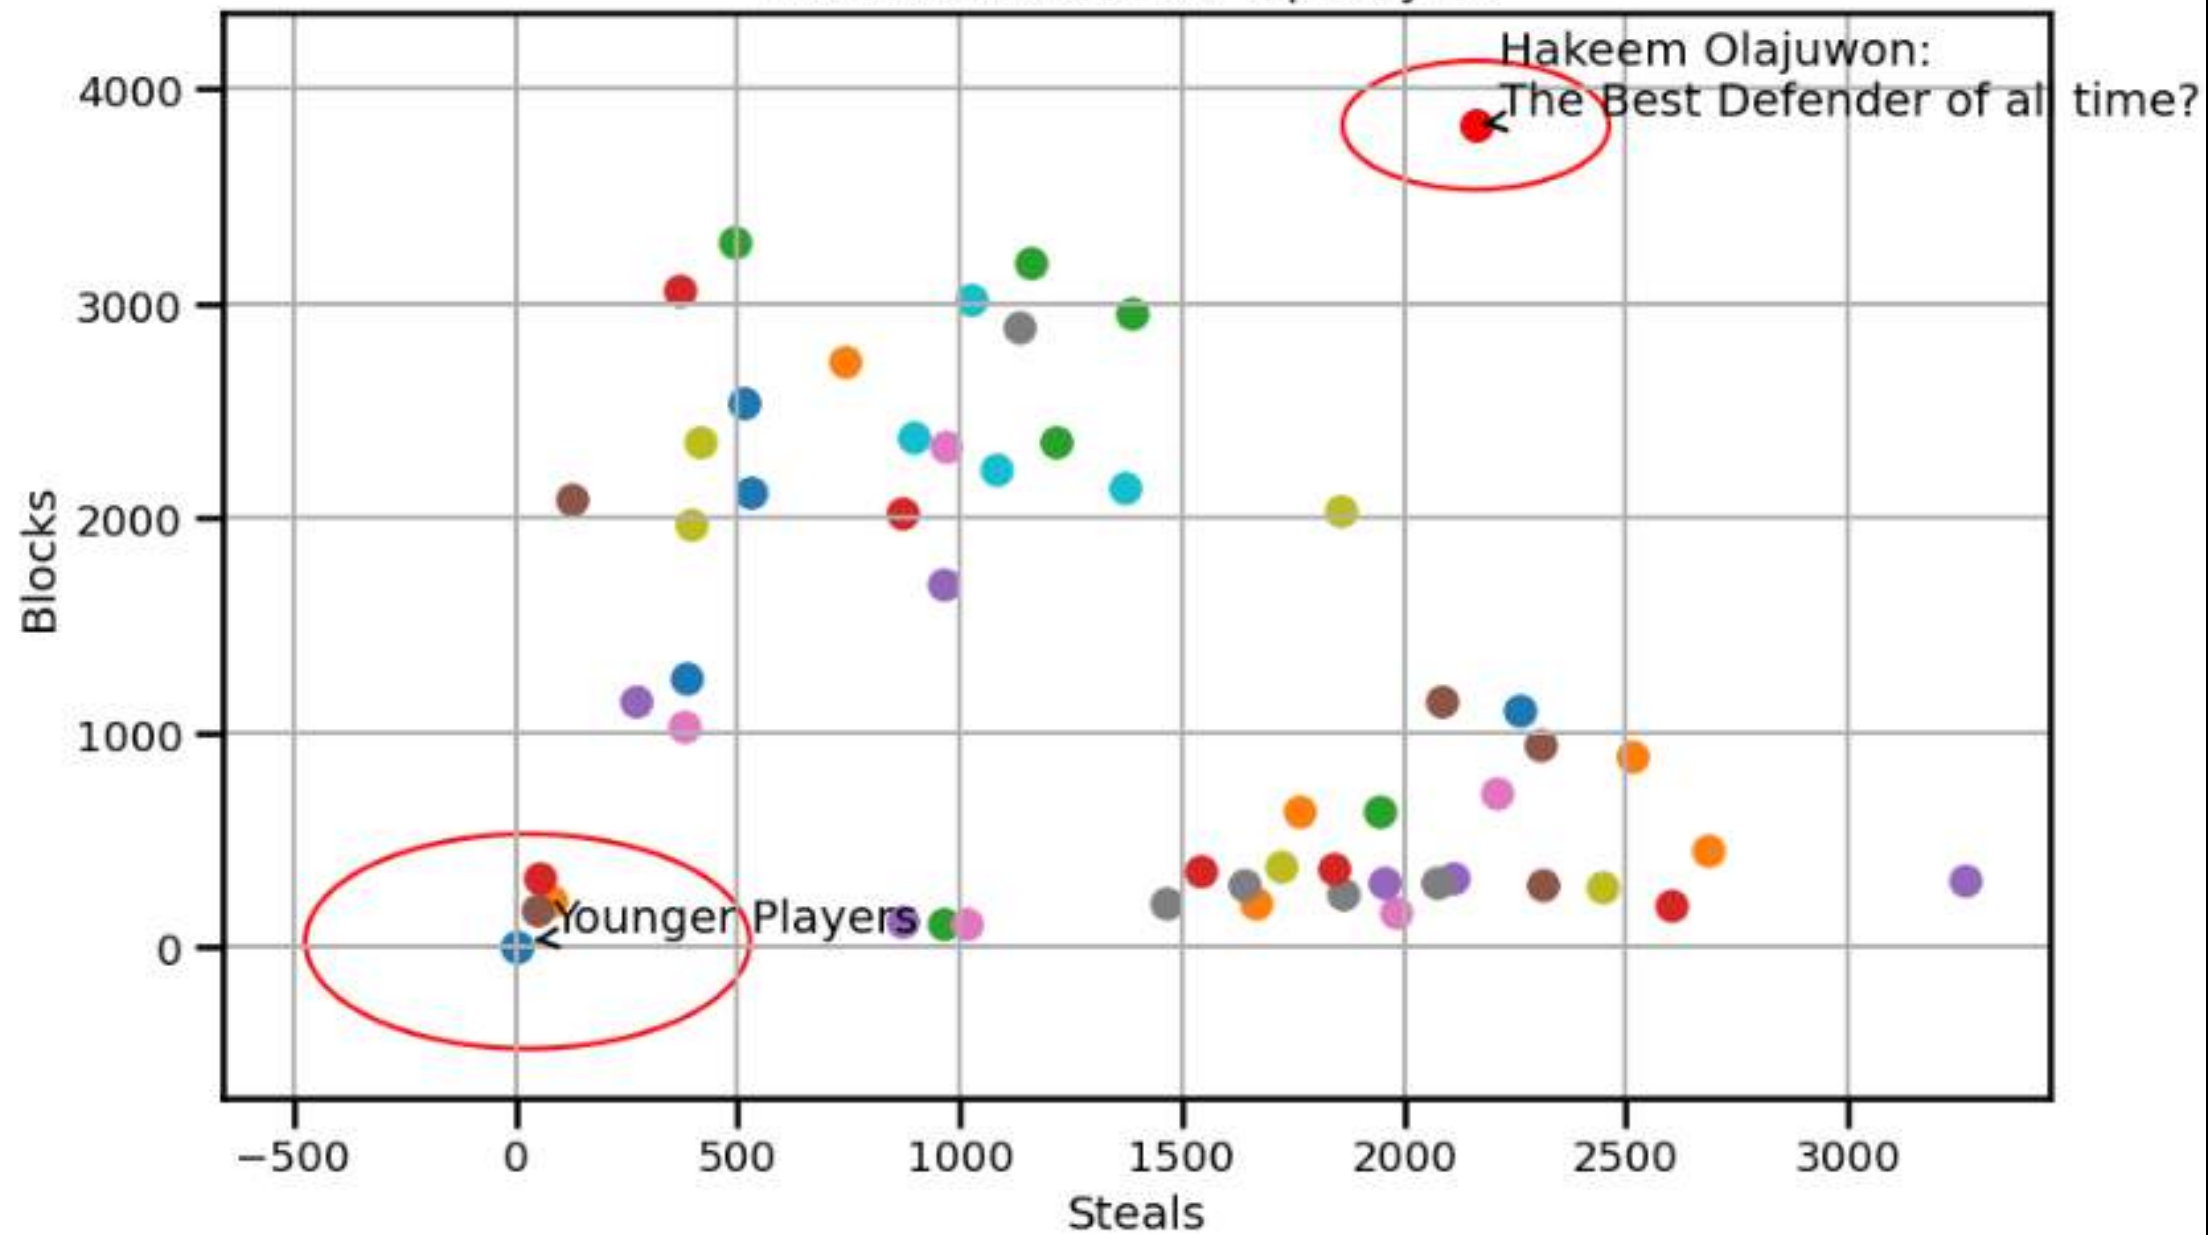

A close-up photograph of Kevin Durant, a professional basketball player, looking upwards with a focused expression. He is holding a Spalding basketball with both hands, positioned in front of his face. The background is dark and out of focus, showing blurred lights in shades of blue and yellow, suggesting an indoor arena setting. The lighting is dramatic, highlighting his facial features and the texture of the basketball.

KEVIN DURANT

Steals vs Blocks for Top Players

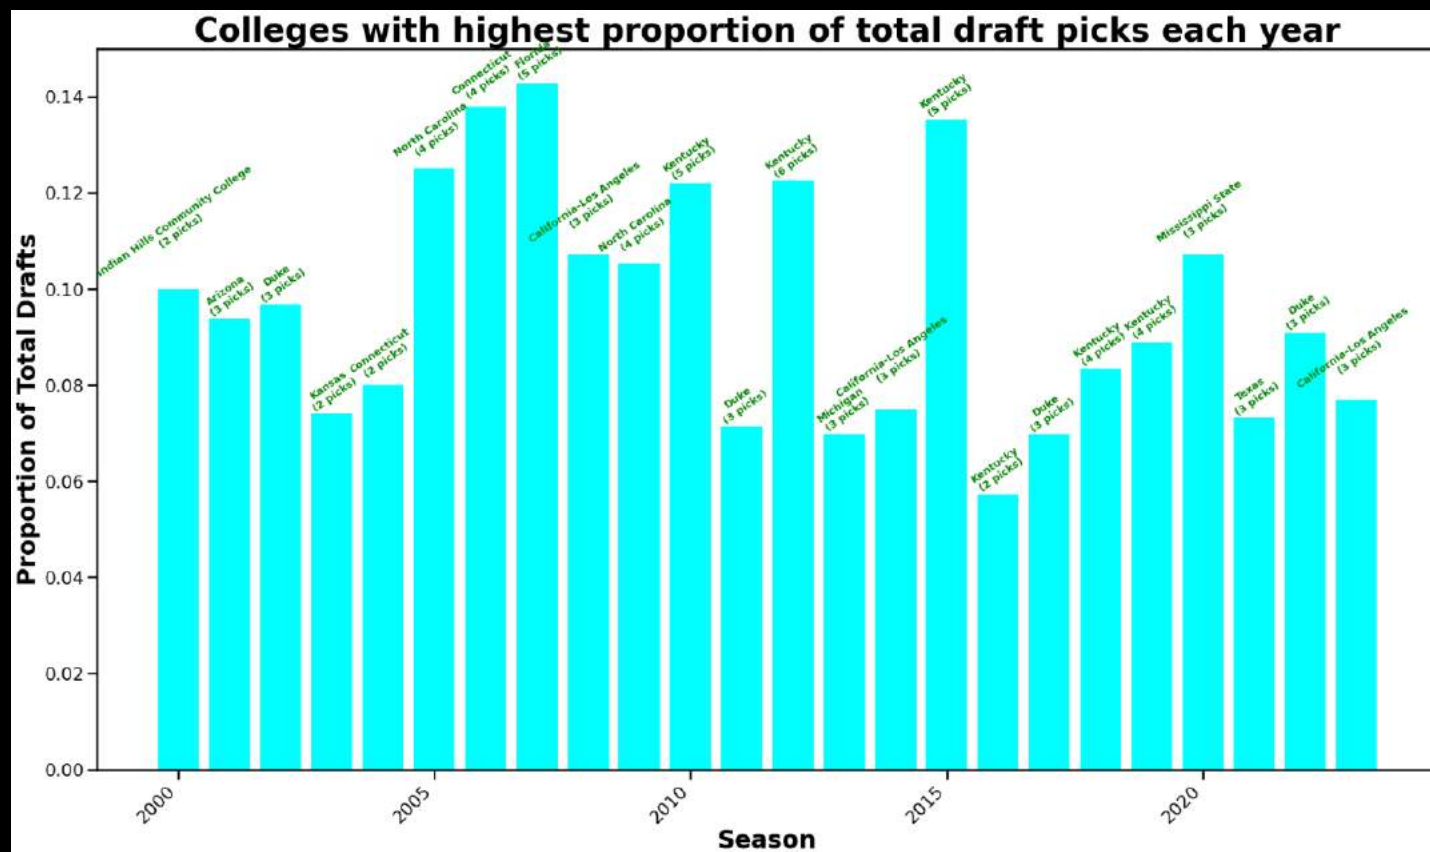

HAKEEM OLAJUWON

A man with glasses and a white shirt is seated at a desk in a meeting room. The desk is cluttered with several laptops, some of which are open. In the background, a large whiteboard is covered with handwritten notes and diagrams. The room has a modern feel with exposed ceiling pipes and pendant lights.

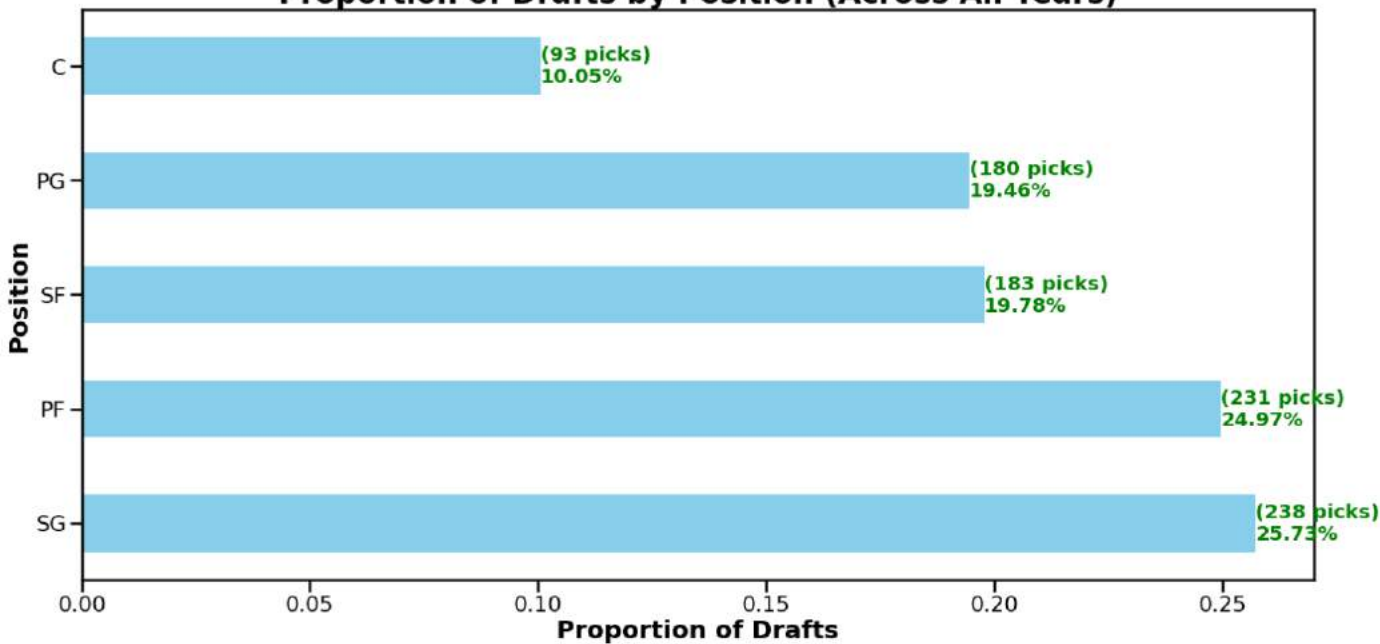

RQ2: WHAT FACTORS INFLUENCE
DRAFT/TRADE STRATEGIES THE
MOST?

DO TEAMS ONLY DRAFT FROM CERTAIN COLLEGES?

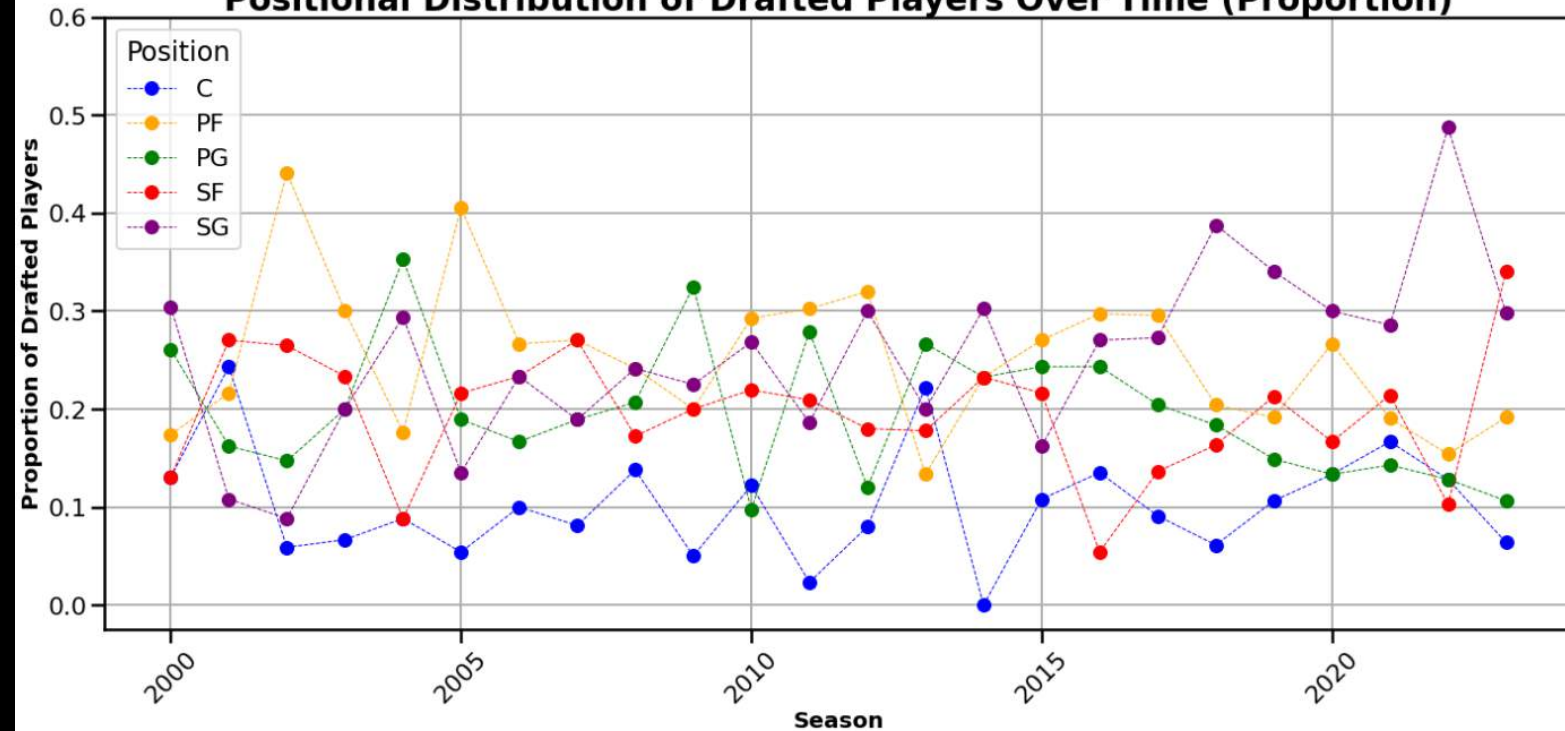

Kentucky	6
Duke	4
California-Los Angeles	3
Connecticut	2
North Carolina	2
Indian Hills Community College	1
Arizona	1
Kansas	1
Florida	1
Michigan	1
Mississippi State	1
Texas	1

Proportion of Drafts by Position (Across All Years)

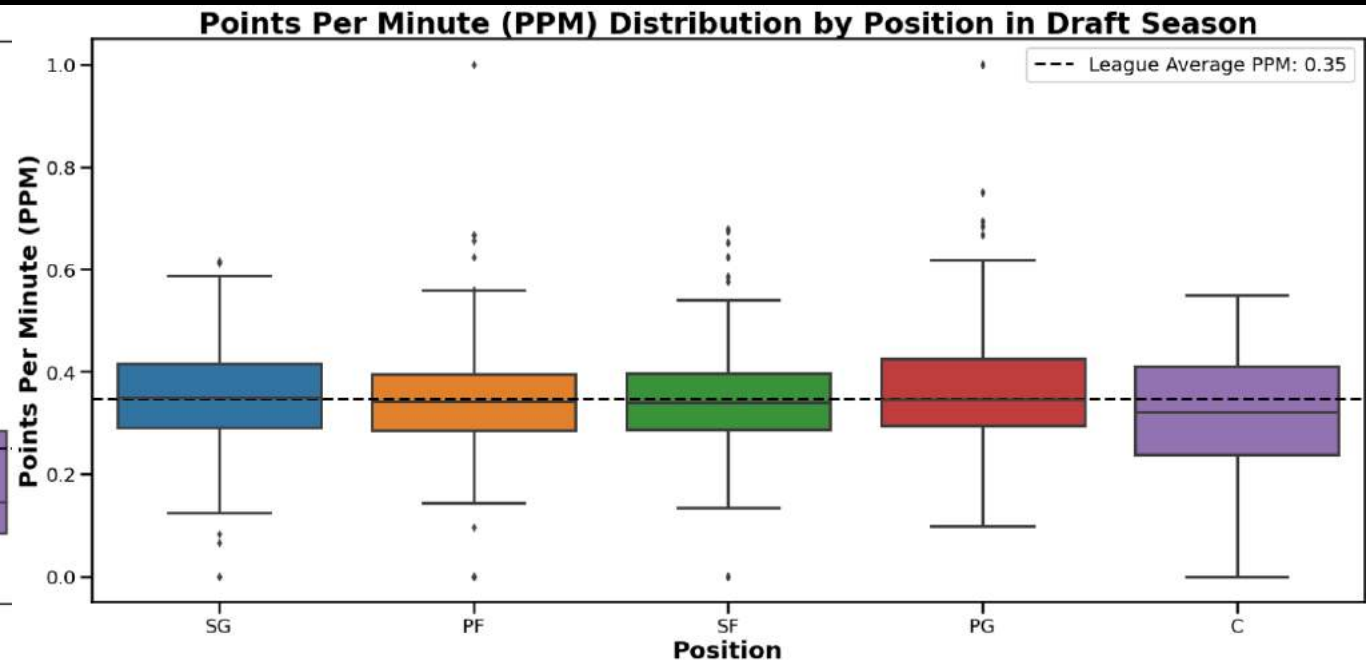

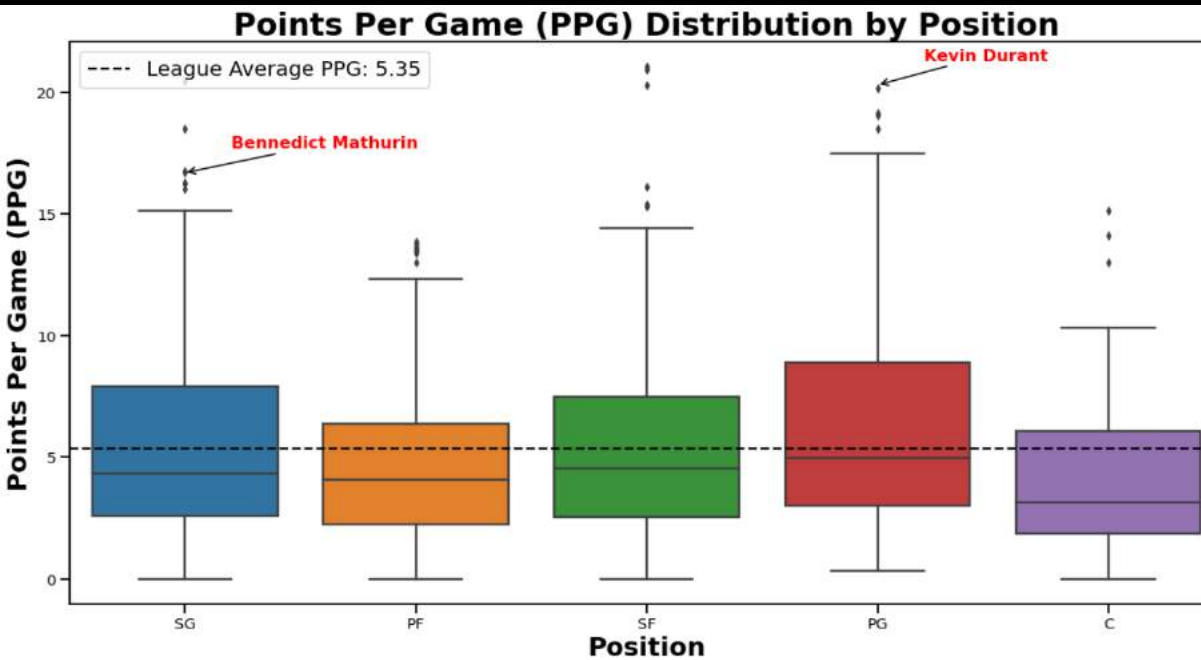

ARE SOME POSITIONS
MORE POPULAR THAN
OTHERS?

Positional Distribution of Drafted Players Over Time (Proportion)

AVERAGE PERFORMANCE OF PLAYERS FROM EACH POSITION

CONCLUSIONS :

- 1) colleges alone may not be sufficient indicators for optimizing draft strategies.
- 2) Positional analysis helps teams identify undervalued talent, maximize on-court efficiency, and build a balanced roster capable of competing at a high level in the NBA.
- 3) while physical attributes may be considered during the evaluation process, they do not necessarily dictate a player's draft/round pick

ARE PLAYERS PERFORMING GOOD OR BAD TRADED?

DISTRIBUTION OF TRADES BY POSITION

CONCLUSION

- 1) Contrary to expectations, a significant proportion of players traded to different teams have a PPM higher than the league average.
- 2) Centers (C) consistently emerge as the least traded position, while Small Forwards (SFs) and Point Guards (PGs) are the most frequently traded positions
- 3) Other Considerations :
 - >Team Chemistry
 - >Model to predict trade outcomes

RQ3: HAS THE LEVEL OF THE
NBA GOTTEN BETTER OR
WORSE

**NBA PLAYERS
BEFORE THE GLOW UP**

SCORING

Top 10 Players: Average 3-pointers Made per Game by Era

Average Points Scored per Game Across Seasons

Number of Players Averaging Over 20 PPG

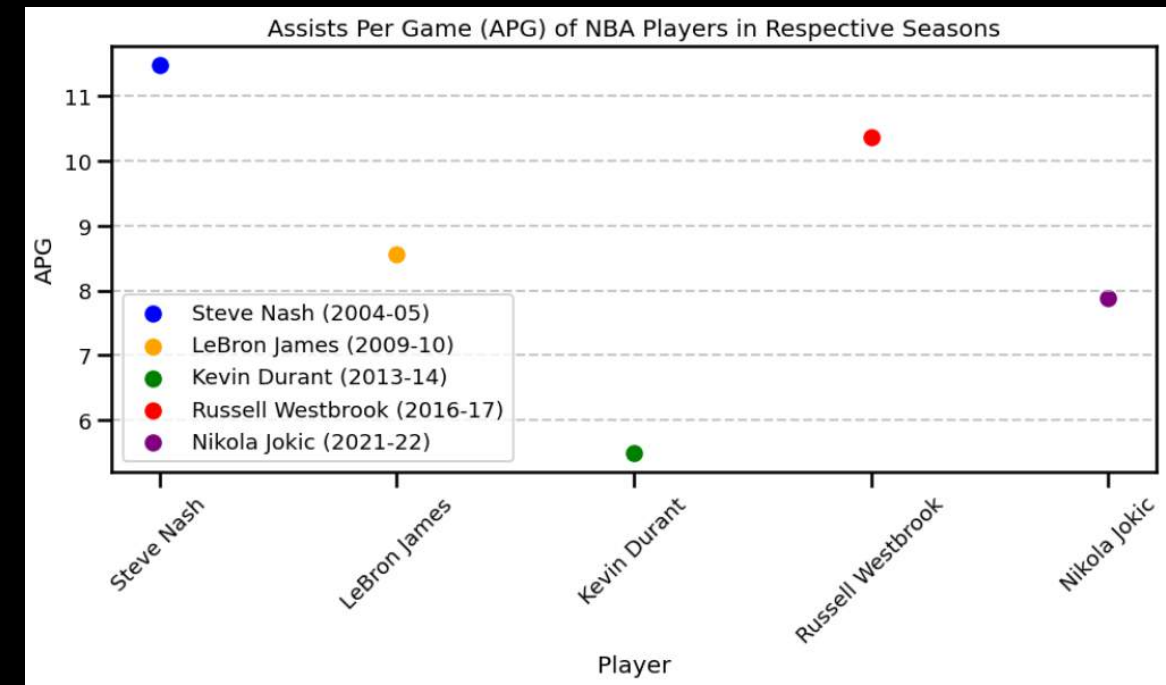

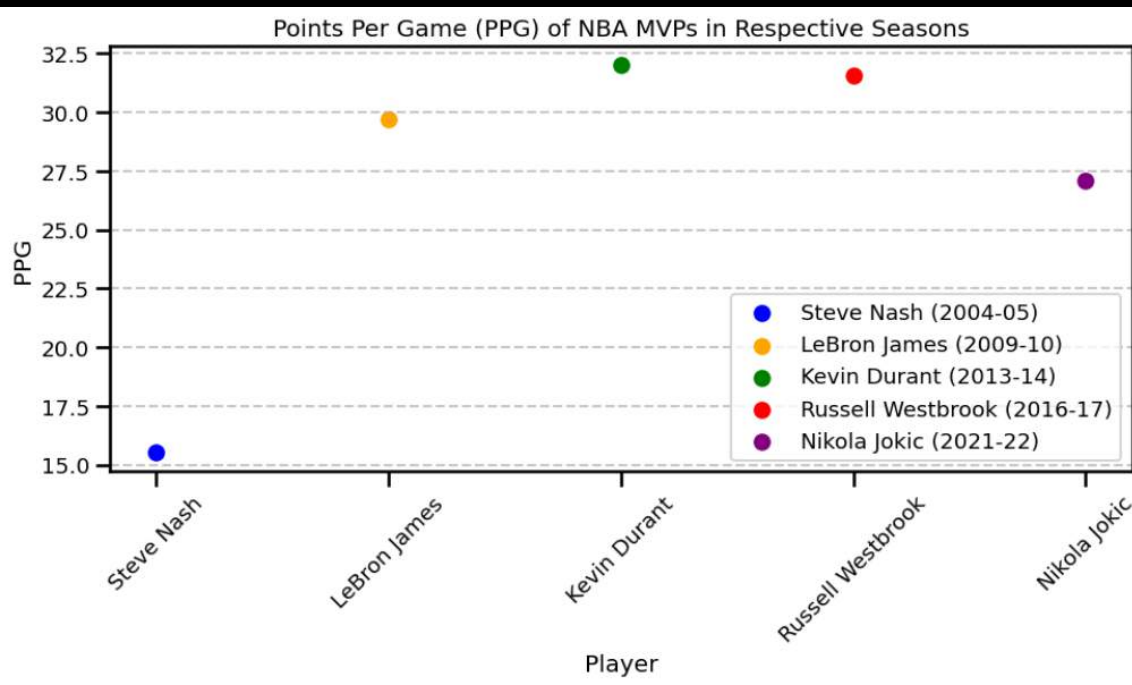

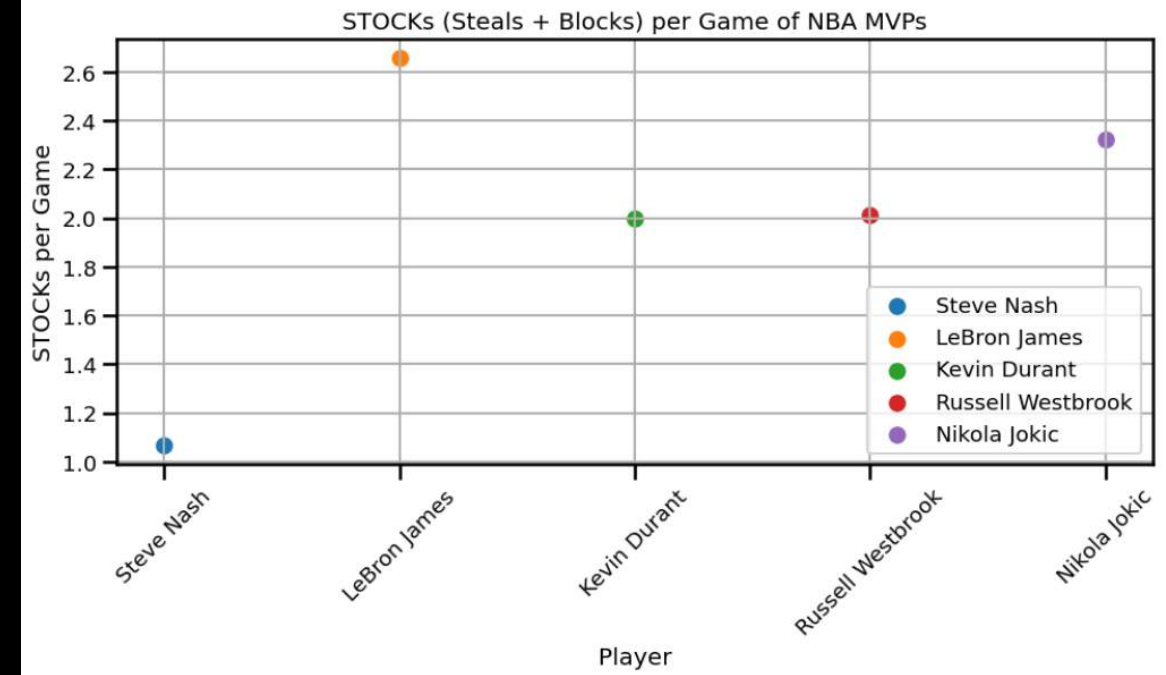

Average STOCKs (Steals + Blocks) per Game by Season

STEVE NASH CASE STUDY

Steve Nash's PPG in the 2004-05 season: 15.533333333333333
Steve Nash's FG% in the 2004-05 season: 50.2 %
Average PPG of the top 5 scorers in 2004-05 season: 27.803807446939025
Average FG% of the top 5 players by PPG in the 2004-05 season: 45.0 %
Steve Nash's 3PT% in the 2004-05 season: 43.1 %
Average 3PT% of the top 5 players by PPG in the 2004-05 season: 36.44 %

Number of players with higher PPG than Steve Nash's 2005 season:

2010: 67

2015: 62

2020: 82

2024: 92

Number of players with higher FG% and higher PPG than Steve Nash's 2005 season:

2010: 16

2015: 7

2020: 15

2024: 26

Number of players with higher APG than Steve Nash's 2005 season:

2010: 0

2015: 0

2020: 0

2024: 0

Number of players with higher AST/TO ratio than Steve Nash's 2005 season (minimum 5 APG):

2010: 3

2015: 3

2020: 1

2024: 12

Number of players with higher STOCKs than Steve Nash's 2005 season:

2010: 204

2015: 215

2020: 239

2024: 249

A photograph of a basketball team huddle on a court. In the center, a coach with a beard and bald head, wearing a grey long-sleeved shirt, is looking towards the camera. He is surrounded by players in blue jerseys. In the foreground, the backs of two players are visible: Kleber on the left and Powell on the right. Other players in blue jerseys with 'DALLAS' written on them are in the background. The scene is set on a basketball court with a crowd visible in the distance.

RQ4 : WHICH PERFORMANCE STATS
CONTRIBUTE TO DETERMINING A
TEAM'S SUCCESS THE MOST?

DO ALL PLAYERS CONTRIBUTE EQUALLY TO A TEAM'S SUCCESS?

Number of Players Required for Teams to Reach 50% of their PPG

CAN WE PREDICT A TEAM'S SUCCESS?

Mean Absolute Error: 1.344382439772509
Mean Squared Error: 2.937034725051422
R-squared: 0.8418432518256858

- As expected, **'win_pct'**, **'field_goal_pct'** and **'three_point_pct'** seem to have the strongest correlation with **'conference_rank'**
- surprising to see features like **'PPG'** and **'points'** have such a low correlation
- Overall, the evaluation metrics suggest that the linear regression model performs reasonably well
- However, there are still a few limitations to consider

TEAM PERFORMANCE AGAINST SPECIFIC OPPONENTS

870 rows × 9 columns

Conclusions :

- Team success in sports is intricately tied to star player performance, team metrics, and performance against specific opponents
- While these factors certainly do influence a team's success, there are additional elements that may impact outcomes

THANK YOU
